Annual Monitoring for Patients on Persistent Medications – HEDIS Results

The Healthcare Effectiveness Data and Information Set (HEDIS) 2015 showed a decrease in Annual Monitoring for Patients on Persistent Medications (MPM). Providers should review their linked members who have been prescribed a diuretic medication anytime since January 1, 2015, as all are recommended to have a diuretic screening. Screenings are a covered benefit of the Alliance, and it is recommended that either a serum potassium or serum creatinine therapeutic monitoring test or a lab panel test be administered. The Alliance will be conducting telephonic outreach in the coming weeks with our members instructing them to reach out to their doctors to schedule a diuretic screening. Thank you for your support in providing quality care to Alliance members.
